

Brass Tube - To - Pipe Adapters

Because standard wrought copper fittings are soft and often required significant time and effort in rework to prevent leaks where the thread interfaces with pipe, we designed these products as a cost effective alternative. These high quality, precision machined fittings eliminate the need to apply layer after layer of Teflon tape to ensure that the joint will hold pressure and are rugged enough to remain leak free.

DESIGN FEATURES

- Male or female pipe thread connections
- Cup or fitting ends for brazing to copper tubing or fittings
- Flush brushing also available
